Saint Louis University and YouGov surveyed 900 likely Missouri voters from August 8 to August 16 about the 2024 election, current political issues, and education policy in Missouri. The following pages present results for most survey questions. The margin of error for survey results for the full sample is 3.79%. Margins of error for questions asked to subsamples are listed below where available. Original data and analyses from the SLU Poll Directors are available at <http://www.slu.edu/poll>.

### Funding and Support

The August 2024 SLU/YouGov Poll was funded by the PRiME Center, an independent research center housed in the SLU’s School of Education.

### About Saint Louis University

Founded in 1818, Saint Louis University is one of the nation’s oldest and most prestigious Catholic institutions. Rooted in Jesuit values and its pioneering history as the first university west of the Mississippi River, SLU offers more than 15,200 students a rigorous, transformative education of the whole person. At the core of the University’s diverse community of scholars is SLU’s service-focused mission, which challenges and prepares students to make the world a better, more just place.

### Methodology and Weighting

YouGov interviewed 1154 Missouri (MO) registered voters, with the goal of screening for and surveying Missouri likely voters. The Missouri registered voters were then matched down to a sample of 988, yielding a target subsample of 900 likely voters including 450 from each treatment group. The respondents were matched to a sampling frame on gender, age, race, education and treatment group. The sampling frame is a politically representative “modeled frame” of US adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity and education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2020 presidential vote choice as well as a four-way stratification of gender, age (4-categories), race (3-categories), and education (4-categories). The weighted dataset of registered MO voters was then subsetted on likely MO voters, and the weights were trimmed and recentered around 1, to produce the final weights for likely Missouri voters.

*Before answering this question, half of the sample was asked to guess the Missouri’s minimum wage and what they thought Missouri’s minimum wage should be. Other respondents did not see these questions. Differences in question presentation could introduce question-ordering effects, affecting responses to above question. However, 57% and 56% of these respective samples supported Proposition A, suggesting this was not the case in this survey.*

Research indicates that high school students need more sleep, and later school start times could increase the amount of sleep students get and thus provide health, academic, and safety benefits. However, some say delaying school start times disrupts the schedules of working parents, creates transportation issues, and complicates the scheduling of extracurricular activities (e.g., sports).

Do you support or oppose high school start times beginning at 8:30am or later in your district?
