Project Code: STLU0007
Project Name: MO likely voters 2023
Prepared for: Steven Rogers
Interviews: 900
Field Period: February 08, 2023 – February 14, 2023
Project Manager: Marissa Shih – marissa.shih@yougov.com
=====

YouGov interviewed 1126 Missouri residents, with the goal of screening for and surveying likely voters. The observations were then matched down to a sample of 1015, yielding a target subsample of 900 MO likely voters. The respondents were matched to a sampling frame on gender, age, race, education, and gun ownership status. The sampling frame is a politically representative "modeled frame" of US adults, which was then subsetted to only include MO likely voters. It is based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The matched cases were then weighted to the sampling frame using propensity scores. The matched cases and the frame were combined, and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, and education. The propensity scores were grouped into deciles of the estimated propensity score in the frame, and post-stratified according to these deciles.

The weights were then post-stratified on 2016 and 2020 Presidential vote choice, as well as a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories). From there, the matched and weighted cases had all MO likely voters extracted, and their weights centered around 1 in order to produce the final dataset.
